

SIMPLY BEAUTIFUL IT SECURITY

is child's play to use

+ SIMPLY BEAUTIFUL IT SECURITY

Everything is running as it did before – only it's safe now.

Today data is an absolutely crucial asset for every organization. Data loss, due to theft or carelessness, can greatly harm an organization, perhaps even causing it to go out of business.

Unfortunately this is a fact, and you have very probably already read about it in the marketing materials of our competitors. Other software providers no doubt advise you to protect yourself as comprehensively as possible against all risks, even if you don't know whether these risks are relevant for your business. This doesn't make any sense to us.

Don't blindly protect yourself across the board. Instead, first UNDERSTAND your own data-security situation and then specifically PROTECT yourself against the risks that are genuinely relevant for your organization. Our Insight module provides all the information about your network and, based on this information, our IntellAct module determines exactly what protection you require. The protective measures with the EgoSecure protection modules can then be set up and adapted to your situation – and even automated.

Another reason for you to get in touch with us is: we make complex things easy and have a "simply beautiful solution" for each function. This has been confirmed by our customers.

94%

of our clients evaluate our product as the best on the market.

97%

of our clients say that our product has completely solved their problems.

92%

of our clients say that our product has the best usability.

All-in-one solution for your data security

"All of the functions are integrated into an overall concept. Unlike the solutions provided by major software producers, which require you to buy many individual products, all of its components combine in a very effective manner."

Jürgen Munk, IT Director GroupM

Reliable system protection in the background

"With EGOSECURE, we have found a professional security solution which protects our entire client landscape from unauthorized data leakage without interfering with our employees' day-to-day work."

UniVersa Lebensversicherungen AG

Tailored to our company's needs

"EGOSECURE was the first company to meet our requirements because it offers a solution that is highly customizable and compatible."

Klaus Thomas, Baden-Baden city administration

**Insight**

Insight collects facts about the data security of your network and displays them in graphs and very detailed tables, meeting the information requirements of both management and administrators. The module therefore provides a foundation so that protective measures do not have to be set up blindly. First, the facts are used to diagnose the requirements for the initial installation of protective measures, and from then on they are used to constantly monitor whether your company's protection requirements change with time.

**IntelliAct**

The new IntelliAct module analyses the facts from Insight and automatically activates protective measures based on pre-defined rules. In addition, it can make comparisons with benchmarks, automatically detecting anomalies and critical situations so that an appropriate response is triggered to protect an organization's data. This automation greatly facilitates the work of administrators and minimizes reaction times considerably.

**Protection**

The protective measures in EgoSecure Data Protection are based on the tried-and-tested **C.A.F.E.** management principle. This concept assigns all protective functions to higher-level data protection categories: **CONTROL**, **AUDIT**, **FILTER** and **ENCRYPTION**.

CONTROL: Device Management, Cloud Access Control, Connection Access Control

AUDIT: To ensure IT-compliance

FILTER: Content Analysis & Filter, Antivirus, Application Control

ENCRYPTION: Removable Device Encryption, Full Disk Encryption, Pre-Boot Authentication, Folder Encryption, Network Encryption, Cloud Encryption, Permanent Android Encryption, IOS Encryption, Mail Encryption

MANAGEMENT: Mobile Device Management, Inventory, Password Manager, Secure Erase, Green IT

The automation of IT security is a current trend which is being discussed and promoted at security conferences worldwide. While others are still busy talking about it, **EGOSECURE** as leading innovator in the industry has already responded to the trend with its current solution EgoSecure Data Protection 12. You can find more information about EgoSecure Data Protection 12 at www.egosecure.com.

Very low administrative workload

"We were convinced by the easy administration and the high degree of transparency it offers to our users. Its product philosophy is exactly what administrators are looking for."

Peter Lange, State Reservoir Association of Saxony

Ongoing further development in dialogue with clients

"In addition to the product's comprehensive functionality, we were very satisfied with the close collaboration with the company – it exceeded the usual amount of support."

Michael Kraemer, Criminal Police Office of the State of Saarland (LKA)

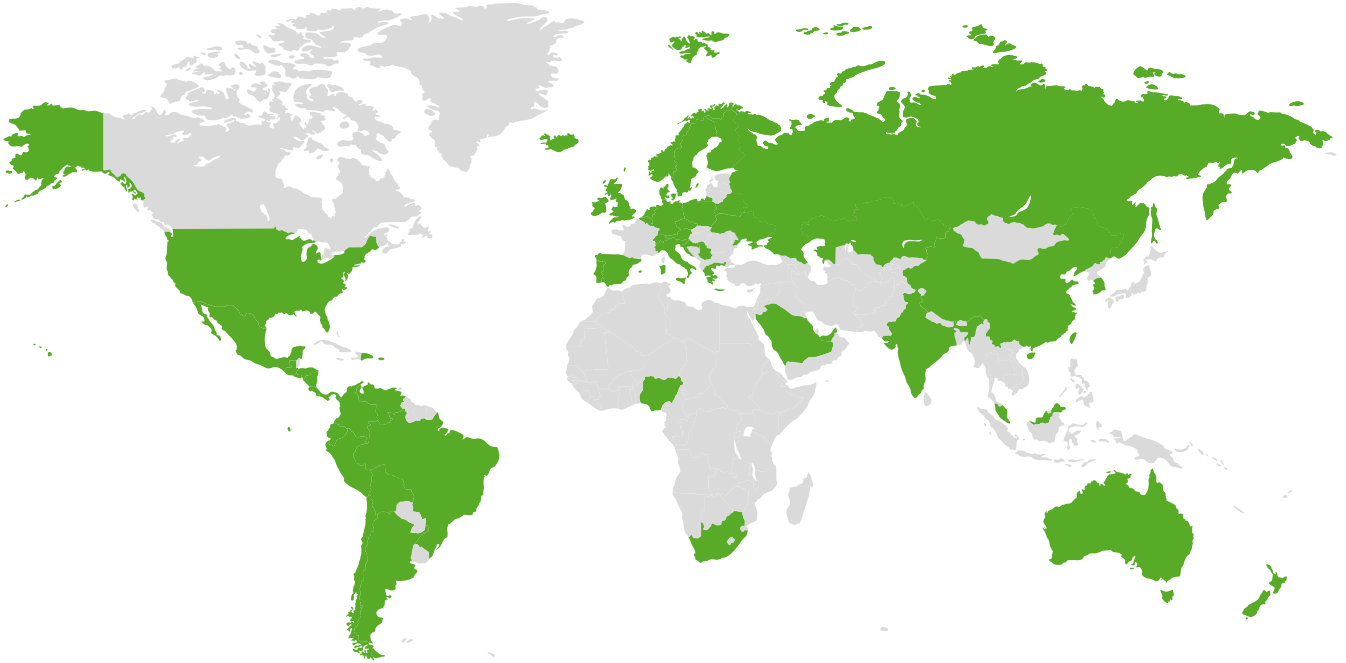

Easy and fast installation, intuitive administration

"With **EGOSECURE**, we have the administration of our end devices, including mobile end devices, firmly and reliably under control. We were very impressed by how quick and easy it was to install the software and by its clear and intuitive management interface."

Oder-Spree Hospital
